income each period should be finite.	nondegenerate ψ , $\mathbb{E}[\psi^{1-\rho}] > 1$.			

Table 4 Sufficient Conditions for Nondegenerate[‡] Solution

Model	Conditions	Comments/Logic
PF Unconstrained	RIC, FHWC°	$ RIC \Rightarrow v(m) < \infty; FHWC \Rightarrow 0 < v(m) $
Section ??		RIC prevents $\bar{c}(m) = 0$
		FHWC prevents $\bar{\mathbf{c}}(m) = \infty$
PF Constrained	PF-GIC, RIC	FHWC must hold $(\Gamma < \mathbf{P} < R \Rightarrow \Gamma < R)$
		Identical to solution to PF Unconstrained for
Section ??		$ m > m_{\#} \text{ for some } 0 < m_{\#} < 1; c(m) = m \text{ for } m \leq m_{\#} $
		(RFC would yield $m_{\#} = 0$ so degenerate $c(m) = 0$)
Appendix ??	PF-GIC,RIC	$\lim_{m\to\infty} \mathring{c}(m) = \bar{c}(m), \lim_{m\to\infty} \mathring{\boldsymbol{\kappa}}(m) = \underline{\kappa}$
		kinks at points where horizon to $b = 0$ changes*
	PF-GIC,RIC	$\lim_{m\to\infty} \mathring{\boldsymbol{\kappa}}(m) = 0$
		kinks at points where horizon to $b = 0$ changes*
Buffer Stock Model	FVAC, WRIC	FHWC $\Rightarrow \lim_{m\to\infty} \mathring{c}(m) = \bar{c}(m), \lim_{m\to\infty} \mathring{\kappa}(m) = \underline{\kappa}$
Section ??		$\text{EHWC+RIC} \Rightarrow \lim_{m \to \infty} \mathring{\boldsymbol{\kappa}}(m) = \underline{\kappa}$
		EHWC+RIC $\Rightarrow \lim_{m\to\infty} \mathring{\mathbf{k}}(m) = 0$
		GIC guarantees finite target wealth ratio
		FVAC is stronger than PF-FVAC
		WRIC is weaker than RIC

‡For feasible m satisfying $0 < m < \infty$, a nondegenerate limiting consumption function defines the unique value of c satisfying $0 < c(m) < \infty$; a nondegenerate limiting value function defines a corresponding unique value of $-\infty < \mathrm{v}(m) < 0$. °RIC, FHWC are necessary as well as sufficient. *That is, the first kink point in c(m) is $m_\#$ s.t. for $m < m_\#$ the constraint will bind now, while for $m > m_\#$ the constraint will bind one period in the future. The second kink point corresponds to the m where the constraint will bind two periods in the future, etc.

 Table 5
 Taxonomy of Perfect Foresight Liquidity Constrained Model Outcomes

 For constrained \grave{c} and unconstrained \bar{c} consumption functions

Main Condition				
Subcondition		Math		Outcome, Comments or Results
PF-GIC		1 <	\mathbf{b}/Γ	Constraint never binds for $m \geq 1$
and RIC	\mathbf{P}/R	< 1		FHWC holds $(R > \Gamma)$; $\dot{c}(m) = \bar{c}(m)$ for $m \ge 1$
and RIC		1 <	\mathbf{P}/R	$\grave{\mathbf{c}}(m)$ is degenerate: $\grave{\mathbf{c}}(m) = 0$
PF-GIC	\mathbf{P}/Γ	< 1		Constraint binds in finite time for any m
and RIC	\mathbf{P}/R	< 1		FHWC may or may not hold
				$\lim_{m\uparrow\infty} \bar{\mathbf{c}}(m) - \grave{\mathbf{c}}(m) = 0$
				$\lim_{m\uparrow\infty} \grave{\boldsymbol{\kappa}}(m) = \underline{\kappa}$
and RIC		1 <	\mathbf{P}/R	EHWC
				$\lim_{m\uparrow\infty} \dot{\boldsymbol{k}}(m) = 0$

Conditions are applied from left to right; for example, the second row indicates conclusions in the case where PF-GIC and RIC both hold, while the third row indicates that when the PF-GIC and the RIC both fail, the consumption function is degenerate; the next row indicates that whenever the PF-GIC holds, the constraint will bind in finite time.
